

8-Bit Restaurant Manager: Instruction Manual

Welcome to 8-Bit Restaurant Manager! This guide will walk you through everything you need to know to turn your humble eatery into a culinary empire.

Getting Started

Your goal is to run a successful restaurant by managing finances, staff, and inventory. You start with **\$5000** and a single **Manager**. Your objective is to grow your cash reserves and build a profitable business. If your cash drops below zero, it's game over!

Core Gameplay Loop

The game progresses day by day. Here's what a typical day looks like:

1. **Prepare for the Day:** Before starting, you can hire/fire staff, purchase ingredients, and adjust your restaurant's settings for the upcoming day.
2. **Start the Day:** Click the "**Start Next Day**" button to begin the simulation. Your daily expenses (like salaries) will be deducted immediately.
3. **Serve Customers:** Throughout the day, customers will arrive and place orders. Your staff will automatically try to fulfill these orders based on your available ingredients and **Action Points (AP)**.
4. **Review Performance:** At the end of the day, a summary will show your total revenue, expenses, and other key metrics. Use this information to plan for the next day.

Understanding the UI

Main Stats Bar (Top)

This sticky bar keeps your most vital stats in view at all times:

- **Day:** The current day of operation.
- **Cash:** Your current money on hand.
- **Revenue:** Total income for the current day.
- **Expenses:** Total costs for the current day, including salaries and purchases.

Previous Day Summary

This panel shows a quick recap of your last day's performance, including customers served, deliveries made, and Action Points used.

Daily Capacity (Action Points)

This is the strategic heart of your restaurant. Your employees generate **Action Points (AP)**

that are spent to perform tasks.

- **Cooking AP:** Required to prepare any dish.
- **Service AP:** Required for in-house customer orders.
- **Delivery AP:** Required for delivery orders.
- **General AP:** A flexible pool generated by managers that can be used for any task.
- **Total AP:** The sum of all available points for the day.

Menu

Displays all the food items you have unlocked. Each item shows its selling price and popularity score, which affects how often it's ordered.

Manage Employees

Here you can hire and fire your staff. Each employee type has a different salary and contributes different types of Action Points. Employees also gain experience and level up over time, becoming more effective.

Ingredient Stock & Daily Ledger

- **Stock:** Shows your current inventory levels. You can buy ingredients in increments of 10, 100, or a custom amount.
- **Ledger:** Acts as a daily receipt, tracking all your spending on ingredients, upgrades, and marketing, as well as your labor costs.

Restaurant Settings & Upgrades

- **Settings:** Use the slider to set the maximum number of customers you want to attract on the next day.
- **Upgrades:** Purchase permanent upgrades like a **Better Oven** (which reduces ingredient costs for baked goods) or temporary boosts like a **Marketing Campaign** (which increases customer traffic for 3 days).

Actions

This panel contains key game functions:

- **Start Next Day:** Begins the daily simulation.
- **View JSON Log:** Opens a detailed, comprehensive log of every action in the game.
- **Export/Import Save:** Allows you to save your game to a file or load a previous save.
- **Reset Game:** Starts the game over from the beginning.

Winning the Game

To win, you need to grow your restaurant's cash reserves to **\$25,000**. To succeed, you'll need to strategically balance your staffing, inventory, and daily customer flow to maximize your

profits. Good luck!
